TECHNICAL SKILLS

Cloud: AWS EC2, S3, RDS, IAM, VPC, Security Groups, Secrets Manager, AWS Budgets, Lambda, DynamoDB, EventBridge
DevOps & Automation: Terraform, Docker, Git, GitHub Actions, CI/CD fundamentals
Backend & Databases: FastAPI, SQLAlchemy, Pydantic, PostgreSQL, Alembic
Programming: Python, SQL fundamentals, Java
Development Tools: VS Code, Swagger / OpenAPI

PROJECTS

CloudExpire | Temporary AWS Resource Lifecycle Manager GitHub

Python, FastAPI, AWS Lambda, DynamoDB, EventBridge, CloudWatch, Terraform, GitHub Actions

- Developed a Python-based AWS resource lifecycle management system for temporary EC2 requests, expiry tracking, and automated cleanup workflows to reduce cloud waste.
- Implemented DynamoDB expiry metadata and status tracking, with EventBridge scheduling a Lambda cleanup handler every five minutes.
- Added ownership safeguards using Project, ManagedBy, and ResourceId tags with resource-state checks to prevent unintended cleanup.
- Provisioned Lambda, DynamoDB, IAM, and CloudWatch through Terraform, integrating GitHub Actions CI and automated tests to validate lifecycle logic.

Acedra | Cloud-Based Student Information & Document Management System GitHub

Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, AWS S3, Secrets Manager, Docker, Terraform, GitHub Actions

- Built a modular FastAPI REST API for student records, authentication, department management, and document operations with PostgreSQL and SQLAlchemy.
- Implemented JWT-based authentication, password hashing, and role-based access control to separate student and administrative permissions and protect records.
- Integrated private Amazon S3 document storage with time-limited presigned download URLs and AWS Secrets Manager for production configuration.
- Applied Pydantic request validation and Alembic schema migrations, incorporating Docker, Terraform, and GitHub Actions into the CI/CD deployment workflow.

Decision-Driven Autonomous Self-Healing Cloud Infrastructure GitHub

Java, Spring Boot, Maven, Linux, HTML, CSS, JavaScript, Chart.js

- Developed a self-healing monitoring prototype tracking CPU, memory, and disk metrics to detect resource overload.
- Built a decision engine to classify detected anomalies and map them to predefined recovery actions for supported scenarios.
- Created a monitoring dashboard displaying resource history, system status, process details, and recovery logs.
- Integrated blockchain-inspired hash-chain logging concepts to maintain traceable incident and recovery records.

EXPERIENCE

Big Bucks Innovation Pvt. Ltd., Java Intern (Hybrid) June 2025 – July 2025

- Contributed to Java application development and database-related programming tasks during the internship.
- Collaborated with a team of 5+ members in an Agile environment, participating in sprint planning and daily stand-ups.
- Assisted with debugging, code maintenance, and development tasks to support code quality and maintainability.

CERTIFICATIONS

- **AWS Cloud Practitioner Essentials** – AWS Skill Builder
- **The Joy of Computing Using Python** – NPTEL
- **Programming in Java** – NPTEL
- **Object-Oriented Programming in Java** – Great Learning

LEADERSHIP & ADDITIONAL EXPERIENCE

- **Chief Editor**, Synexzia ’25 College Technical Symposium: Coordinated technical content and supported event activities.
- **Freelance Multimedia Designer:** Designed short-film posters and produced 10+ motion graphics videos.

EDUCATION

Bachelor’s Degree in Information Technology 2022 – 2026
Agni College of Technology, Chennai CGPA: 7.98/10
